Photoshop is extremely popular, and you'll encounter it everywhere. Usually, even if you can't readily see the filename extension at the end of a file's name, you'll be able to figure out what type of file it is by the file format and file type. For example, most file formats are either .jpg, .tif, .png, .psd, .tga, or .dng, and you'll know what's inside the file by looking at what kind of file it is. If you have the extension on your computer, it's a bit more likely to show the file type. For example, on a computer

---

running Windows, a JPEG or PSD file with the `_.jpg_` or `_.psd_` extension would show the type of file within. ## What Features Can Photoshop Offer? The following list outlines some of the many features of Photoshop: \*

**\*\*Blending modes:\*\*** Photoshop has six blending modes: Multiply, Screen, Overlay, Color Burn, Color Dodge, and Darken/Lighten. \*

**\*\*Channel-mixing tools:\*\***

Photographers use these to isolate, adjust, and make changes to different areas of an image. For example, you can use a channel to change the brightness of a specific area. \* **\*\*Color**

replacement:\*\* It enables you to make changes to an image, such as changing a purple cloud into a red, or gray sky into a pink one. \*

\*\*GIF:\*\* It creates photo-quality GIF files. \*

\*\*Layer panels:\*\* It enables you to create and use Layers — such as decorative elements, titles, or simple brushes, as well as layers that contain Photoshop-generated content such as text or images. \*

\*\*Lasso tool:\*\* It enables you to isolate areas of an image quickly and easily — whether you need to eliminate a certain area of an image or a specific element within it. \*

\*\*Metadata:\*\* It keeps

track of the date, location, and other information about your images. You can insert it into JPEG and TIFF files, which enables you to automatically include it in file names. \* \*\*Multiple windows:\*\* It enables you to work on multiple images simultaneously. \* \*\*Pixel-editing tools:\*\* For more technical manipulation, you can use any of the tools that allow you to change pixels (or small areas) individually. For example, you can use the

We've got our ears to the ground, when it comes to big-name candidates and who's attacking who, and so far, most of the attention has been directed at Mitt Romney and Barack Obama. With just a week to go before the election, we're hoping that'll change.

Michelle Bachmann The positive news for Barack Obama is that he is about to be served one of the best meals of his life. Obama himself is serving up a bowl of fettuccine carbonara, leaving no doubts about who's going to win and (we're betting) who's going to be first to the podium on election night. Gone but not forgotten: George W. Bush 6. Jon Huntsman The former Utah governor has dropped out of the race. We sincerely hope he wins. The good news for Jon is that he's now free to join us after the election for a special episode, in which we try

to explain to him why he's wrong about everything. 7. Buddy Roemer Paul went down but Roemer won't. He's still running, with 11 percent of voters giving him the Democratic nomination for president, despite having no money and no campaign staff.
