Q: Java: What to do when there is a memory error when launching a program with a pointer? I am making a simple boardgame in java (like monopoly) where you play against a computer. I wrote the program like it is done here. When i test this with pointers it throws an error:

Fatal Error: Null Pointer Exception If i delete the pointers part it does not throw an error and it works. This is the error i get: Exception in thread "main" java.lang.Error: Unresolved compilation problem: The method getLeft(int) in the type Grapher is not applicable for the arguments (int) I would like to know what i should do to fix the error. Is there a way to fix this error to make it work? I would prefer to have the pointers though.

Code: import java.util.ArrayList; public class Grapher extends LinkedList { public Grapher(int left, int right, int y, ArrayList items) { super(left, right, y); for (int i = left; i = 0 && right
